

Cloud Infrastructure Planning and Design v2 (CIPD2)

ID CIPD2 **Preis** US \$ 3'000.– (exkl. MwSt.) **Dauer** 5 Tage

Zielgruppe

This course is intended for architects, designers, and consultants who are involved in the planning and design of cloud infrastructure components.

Voraussetzungen

Students are expected to be technical professionals with three or more years of design experience in storage, operating systems, virtualization, networking, business continuity, or disaster recovery.

Recommended prerequisites include: Dell EMC Information Storage and Management, Dell EMC Cloud Infrastructure and Services, VMware Certified Professional (VCP) and Cisco Certified Network Associate (CCNA).

Kursziele

Upon successful completion of this course, participants should be able to:

- Apply relevant design processes and techniques when producing an effective cloud infrastructure design.
- Create a cloud infrastructure design that addresses business requirements and constraints that were identified during an assessment.
- Communicate the benefits, challenges, and considerations of various cloud-enabling technologies as well as their relevance in meeting a business requirement or constraint.
- Develop a cloud infrastructure design that includes components such as cloud management, application platform, consumer resources, hybrid and multicloud capabilities, and disaster recovery.

Kursinhalt

The content of this course is designed to support the course objectives.

Module: Introduction to Cloud Design

- Driving digital transformation through cloud
- Cloud infrastructure design approach, goals, and scope
- Cloud solution design project lifecycle

Module: Design Parameters

- Cloud reference architecture
- General design considerations for cloud infrastructure

Module: Data Collection and Analysis

- Data collection process and metrics
- Data collection tools
- Business value analysis
- TCO and ROI

Module: Architecting a Do-It-Yourself Solution

- Selection criteria
- Compute considerations
- Storage considerations
- Network considerations

Module: Architecting a CI/HCI Solution

- CI/HCI selection criteria
- Strategies and design considerations

Module: Cloud Management Platform (CMP)

- CMP reference architecture
- CMP infrastructure
- Selection criteria for CMP
- CMP design considerations

Module: Hybrid and Multicloud

- Hybrid and multicloud use cases
- Design considerations for hybrid and multicloud
- Disaster recovery considerations

Module: Application Development and Deployment Platform

- Key requirements for application platform
- Options to build an application platform
- Design considerations for Do-It-Yourself

Cloud Infrastructure Planning and Design v2 (CIPD2)

- Design considerations for using PaaS solution

In addition to lecture, this course includes case studies, exercises and labs designed to allow practical experience for the participant.
