

Building AI Agents with Multimodal Models (BAAMM)

ID BAAMM Preis auf Anfrage Dauer 8 Stunden

Voraussetzungen

- A basic understanding of Deep Learning Concepts.
- Familiarity with a Deep Learning framework such as TensorFlow, PyTorch, or Keras. This course uses PyTorch.

Kursziele

In this course, you will learn about:

- Different data types and how to make them neural network ready
- Model fusion, and the differences between early, late, and intermediate fusion
- PDF extraction using OCR
- The difference between modality and agent orchestration
- Customization of NVIDIA AI Blueprints with Video Search and Summarization (VSS)

Kursinhalt

We'll begin with a robotics use case to show how different datatypes impact an effective neural-networks architecture. The mathematical concepts we learn in the robotics use case can then be applied to Large Language Models (LLMs) in order to modify these powerful model to accept non-language data input. We'll end with orchestration where multiple models work together to answer user queries.
