

Planning and Designing Databases on AWS (PD-DB)

ID PD-DB **Price** CHF 2,390.—(excl. VAT) **Duration** 3 days

Who should attend

This course is intended for learners in the following roles:

- Solutions architects
- Database architects
- Developers

This course is part of the following Certifications

AWS Certified Database – Specialty (ACDBS)

Prerequisites

We recommend the following prerequisites for attendees of this course:

- Familiarity with AWS database services
- Understanding of database design concepts and/or data modeling for relational or nonrelational databases
- Familiarity with cloud computing concepts
- Familiarity with general networking and encryption concepts
- Completion of the digital course Introduction to Building with AWS Databases

Course Content

- Course Introduction
- AWS Purpose-Built Databases
- Amazon Relational Database Service (Amazon RDS)
- Amazon Aurora
- Amazon DynamoDB
- Amazon Keyspaces (for Apache Cassandra)
- Amazon DocumentDB (with MongoDB compatibility)
- Amazon Quantum Ledger Database (Amazon QLDB)
- Amazon Neptune
- Amazon Timestream
- Amazon ElastiCache
- Amazon MemoryDB for Redis
- Amazon Redshift
- Tools for Working with AWS Databases

Course Objectives

In this course, you will learn how to do the following:

- Summarize the AWS Well-Architected Framework for designing database solutions.
- Choose an appropriate purpose-built database service for a given workload.
- Design a relational database solution to solve a business problem.
- Design a NoSQL database solution to solve a business problem.
- Analyze data from multiple databases to solve a business problem.
- Discuss the security considerations for your database solution.
