

# Performing CyberOps Using Cisco Security Technologies (CBRCOR)

**ID** CBRCOR **Price** CHF 4,200.—(excl. VAT) **Duration** 5 days

## Who should attend

Although there are no mandatory prerequisites, the course is particularly suited for the following audiences:

- Cybersecurity engineer
- Cybersecurity investigator
- Incident manager
- Incident responder
- Network engineer
- SOC analysts currently functioning at entry level with a minimum of 1 year of experience

## This course is part of the following Certifications

Cisco Certified Cybersecurity Professional (CCCP)

## Prerequisites

Although there are no mandatory prerequisites, to fully benefit from this course, you should have the following knowledge:

- Familiarity with UNIX/Linux shells (bash, csh) and shell commands
- Familiarity with the Splunk search and navigation functions
- Basic understanding of scripting using one or more of Python, JavaScript, PHP or similar.

Recommended Cisco offering that may help you prepare for this course:

- [Implementing and Administering Cisco Solutions \(CCNA\)](#)
- [Understanding Cisco Cybersecurity Operations Fundamentals \(CBROPS\)](#)

## Course Objectives

After taking this course, you should be able to:

- Describe the types of service coverage within a SOC and operational responsibilities associated with each.

- Compare security operations considerations of cloud platforms.
- Describe the general methodologies of SOC platforms development, management, and automation.
- Explain asset segmentation, segregation, network segmentation, micro-segmentation, and approaches to each, as part of asset controls and protections.
- Describe Zero Trust and associated approaches, as part of asset controls and protections.
- Perform incident investigations using Security Information and Event Management (SIEM) and/or security orchestration and automation (SOAR) in the SOC.
- Use different types of core security technology platforms for security monitoring, investigation, and response.
- Describe the DevOps and SecDevOps processes.
- Explain the common data formats, for example, JavaScript Object Notation (JSON), HTML, XML, Comma-Separated Values (CSV).
- Describe API authentication mechanisms.
- Analyze the approach and strategies of threat detection, during monitoring, investigation, and response.
- Determine known Indicators of Compromise (IOCs) and Indicators of Attack (IOAs).
- Interpret the sequence of events during an attack based on analysis of traffic patterns.
- Describe the different security tools and their limitations for network analysis (for example, packet capture tools, traffic analysis tools, network log analysis tools).
- Analyze anomalous user and entity behavior (UEBA).
- Perform proactive threat hunting following best practices.

## How you'll benefit

This course will help you:

- Gain an advanced understanding of the tasks involved for senior-level roles in a security operations center
- Configure common tools and platforms used by security operation teams via practical application
- Prepare you to respond like a hacker in real-life attack scenarios and submit recommendations to senior management
- Prepare for the 350-201 CBRCOR core exam

- Earn 40 CE credits toward recertification

## Training Centres worldwide
