

# Operations Orchestration (OO) Citizen Developer (OOCD)

ID OOCD Price on request Duration 4 days

## Who should attend

Workflow Developers, Automation Operators, and other engineers responsible for the implementation of OO.

## Prerequisites

To be successful in this course, you should have the following prerequisites or knowledge:

- Networking terms and concepts.
- Web browsers and Telnet or SSH connection methods.
- Different operating system environments.

## Course Objectives

On completion of this course, participants should be able to:

- Run and manage automated workflows using OO.
- Author, maintain, document, and package new automated workflows using the OO Workflow Designer.
- Test and debug the flows locally and remotely.
- Record and debug RPA activities for UI automation.
- Define inputs and outputs for flows and steps.
- Author and debug hybrid flows.
- Work with looping and branching operations.
- Use Activity Designer.
- Generate project content for REST API.
- Create custom Python operations.
- Work with CloudSlang.
- Use SCM to integrate with GitHub repositories.
- Integration with Terraform enterprise.

## Course Content

### Module 1: Course Overview

- Identify the contents and objectives of the course
- Define the class schedule and class logistics
- Identify the related courses

### Module 2: Introduction to OO

- Describe OO and its key benefits
- Explain the system and functional architecture of OO
- Discuss the key capabilities of OO
- Define content packs, projects, flows and operations

### Module 3: Basic Flow Authoring with Workflow Designer

- Describe and use OO Workflow Designer
- Identify flow authoring components
- Create and debug a basic flow

### Module 4: Recording RPA Activities

- Describe RPA
- Use RPA Recorder
- Create an RPA Activity
- Debug an RPA Flow Activity

### Module 5: Defining Inputs and Outputs

- Define inputs and outputs for steps and flow
- Describe step properties
- Define system properties
- Describe flow properties
- Use Python expressions
- Using Python functions

### Module 6: Authoring Hybrid Flows

- Describe hybrid flows
- Create hybrid flows
- Debug hybrid flows remotely
- Describe AFL content packs

### Module 7: Advanced Flow Authoring

- Define results and transitions
- Define and use Subflows
- Implement branching and looping in flows
- Use worker groups and robot groups
- Describe Activity Designer
- Use CloudSlang libraries

### Module 8: Using with CloudSlang Content Pack

- Describe commonly-used CS Content Packs

#### **Module 9: Content Generator for REST API**

- Use Content Generator for REST API

#### **Module 10: Creating Custom Python Operations**

- Implement Python Operations
- Install a Python custom library
- Implement Python Custom library functionality

#### **Module 11: Working with CloudSlang**

- Describe CloudSlang
- Describe how CloudSlang is used in OO
- Import CloudSlang code developed outside of OO
- Contribute to CloudSlang using Git

#### **Module 12: Using Source Control Management (SCM)**

- Describe GIT Repository
- Use Git Repositories in Workflow Designer

#### **Module 13: OO Integration with Terraform Enterprise**

- Explain what is Terraform
- Describe the OO integration with Terraform

#### **Module 14: Using Ansible Integration Content**

- Describe the integration of content pack structures
- Explain about Ansible Integration
- Run Playbook with Variables
- Monitor the Operations Agent

Training Centres worldwide

**Fast Lane Institute for Knowledge Transfer (Switzerland) AG**

Husacherstrasse 3  
CH-8304 Wallisellen
