

Red Hat High Availability Clustering with Expertise Exam (RH437)

ID RH437 Price CHF 4,320.—(excl. VAT) Duration 5 days

Who should attend

Senior Linux system administrators who use high-availability clustering and fault-tolerant shared storage technologies to maximize resiliency of production services.

This course is part of the following Certifications

Red Hat Certified Specialist in High Availability Clustering (RHCOE-HAC)

Prerequisites

- Take our free assessment to gauge whether this offering is the best fit for your skills.
- [Red Hat Certified System Administrator \(RHCSA\) Exam \(EX200\)](#) and associated courses.
- [Red Hat Certified Engineer Exam \(EX294\)](#) and associated courses.

Course Objectives

Impact on the organization

High availability clustering can improve reliability, availability, and resiliency of your mission-critical services, resulting in reduced downtime and easier hardware maintenance.

Red Hat has created this course in a way intended to benefit our customers, but each company and infrastructure is unique, and actual results or benefits may vary.

Impact on the individual

As a result of attending this course, you will be able to create, manage, and troubleshoot highly available network services and tightly-coupled cluster storage for business-critical applications.

You should have the ability to demonstrate the following skills:

- Improve application uptime by using high-availability clustering
- Manage storage in an high availability environment using

iSCSI initiators, HA-LVM or LVM Shared Volume Groups as appropriate, and GFS2 cluster file systems

- Implement strategies to identify and eliminate single points of failure in high availability clusters

Course Content

- Install and configure a Pacemaker-based high availability cluster
- Create and manage highly available services
- Troubleshoot common cluster issues
- Work with shared storage (iSCSI) and configure multipathing
- Implement Logical Volume Manager (LVM) in cluster-aware configurations
- Configure GFS2 file systems on storage shared by multiple nodes
