

# Security in Google Cloud (SGCP-3D)

ID SGCP-3D Prix CHF 2 490,- (Hors Taxe) Durée 3 jours

## A qui s'adresse cette formation

This class is intended for the following job roles:

- Cloud information security analysts, architects, and engineers
- Information security/cybersecurity specialists
- Cloud infrastructure architects
- Developers of cloud applications.

## Cette formation prépare à la/aux certifications

Google Cloud Certified Professional Cloud Security Engineer (PCSE)

## Pré-requis

To get the most out of this course, participants should have:

- Prior completion of [Google Cloud Fundamentals: Core Infrastructure \(GCF-CI\)](#) or equivalent experience
- Prior completion of [Networking in Google Cloud Platform \(NGCP\)](#) or equivalent experience
- Knowledge of foundational concepts in information security:
  - Fundamental concepts:
    - vulnerability, threat, attack surface
    - confidentiality, integrity, availability
  - Common threat types and their mitigation strategies
  - Public-key cryptography
    - Public and private key pairs
    - Certificates
    - Cipher types
    - Key width
  - Certificate authorities
  - Transport Layer Security/Secure Sockets Layer encrypted communication
  - Public key infrastructures
  - Security policy
- Basic proficiency with command-line tools and Linux operating system environments
- Systems Operations experience, including deploying and managing applications, either on-premises or in a public cloud environment
- Reading comprehension of code in Python or JavaScript

## Objectifs

This course teaches participants the following skills:

- Understanding the Google approach to security
- Managing administrative identities using Cloud Identity.
- Implementing least privilege administrative access using Google Cloud Resource Manager, Cloud IAM.
- Implementing IP traffic controls using VPC firewalls and Cloud Armor
- Implementing Identity Aware Proxy
- Analyzing changes to the configuration or metadata of resources with GCP audit logs
- Scanning for and redact sensitive data with the Data Loss Prevention API
- Scanning a GCP deployment with Forseti
- Remediating important types of vulnerabilities, especially in public access to data and VMs

## Contenu

### PART I: MANAGING SECURITY IN GOOGLE CLOUD

#### Module 1 Foundations of GCP Security

- Understand the GCP shared security responsibility model
- Understand Google Cloud's approach to security
- Understand the kinds of threats mitigated by Google and by GCP
- Define and Understand Access Transparency and Access Approval (beta)

#### Module 2 Cloud Identity

- Cloud Identity
- Syncing with Microsoft Active Directory using Google Cloud Directory Sync
- Using Managed Service for Microsoft Active Directory (beta )
- Choosing between Google authentication and SAML-based SSO
- Best practices, including DNS configuration, super admin accounts
- Lab: Defining Users with Cloud Identity Console

## Module 3 Identity, Access, and Key Management

- GCP Resource Manager: projects, folders, and organizations
- GCP IAM roles, including custom roles
- GCP IAM policies, including organization policies
- GCP IAM Labels
- GCP IAM Recommender
- GCP IAM Troubleshooter
- GCP IAM Audit Logs
- Best practices, including separation of duties and least privilege, the use of Google groups in policies, and avoiding the use of primitive roles
- Labs: Configuring Cloud IAM, including custom roles and organization policies

## Module 4 Configuring Google Virtual Private Cloud for Isolation and Security

- Configuring VPC firewalls (both ingress and egress rules)
- Load balancing and SSL policies
- Private Google API access
- SSL proxy use
- Best practices for VPC networks, including peering and shared VPC use, correct use of subnetworks
- Best security practices for VPNs
- Security considerations for interconnect and peering options
- Available security products from partners
- Defining a service perimeter, including perimeter bridges
- Setting up private connectivity to Google APIs and services
- Lab: Configuring VPC firewalls

## PART II: SECURITY BEST PRACTICES ON GOOGLE CLOUD

### Module 5 Securing Compute Engine: techniques and best practices

- Compute Engine service accounts, default and customer-defined
- IAM roles for VMs
- API scopes for VMs
- Managing SSH keys for Linux VMs
- Managing RDP logins for Windows VMs
- Organization policy controls: trusted images, public IP address, disabling serial port
- Encrypting VM images with customer-managed encryption keys and with customer-supplied encryption keys
- Finding and remediating public access to VMs
- Best practices, including using hardened custom images, custom service accounts (not the default service account), tailored API scopes, and the use of application default

credentials instead of user-managed keys

- Lab: Configuring, using, and auditing VM service accounts and scopes
- Encrypting VM disks with customer-supplied encryption keys
- Lab: Encrypting disks with customer-supplied encryption keys
- Using Shielded VMs to maintain the integrity of virtual machines

### Module 6 Securing cloud data: techniques and best practices

- Cloud Storage and IAM permissions
- Cloud Storage and ACLs
- Auditing cloud data, including finding and remediating publicly accessible data
- Signed Cloud Storage URLs
- Signed policy documents
- Encrypting Cloud Storage objects with customer-managed encryption keys and with customer-supplied encryption keys
- Best practices, including deleting archived versions of objects after key rotation
- Lab: Using customer-supplied encryption keys with Cloud Storage
- Lab: Using customer-managed encryption keys with Cloud Storage and Cloud KMS
- BigQuery authorized views
- BigQuery IAM roles
- Best practices, including preferring IAM permissions over ACLs
- Lab: Creating a BigQuery authorized view

### Module 7 Securing Applications: techniques and best practices

- Types of application security vulnerabilities
- DoS protections in App Engine and Cloud Functions
- Cloud Security Scanner
- Lab: Using Cloud Security Scanner to find vulnerabilities in an App Engine application
- Identity Aware Proxy
- Lab: Configuring Identity Aware Proxy to protect a project

### Module 8 Securing Kubernetes: techniques and best practices

- Authorization
- Securing Workloads
- Securing Clusters
- Logging and Monitoring

## PART III: MITIGATING VULNERABILITIES IN GOOGLE CLOUD

## Module 9 Protecting against Distributed Denial of Service Attacks

- How DDoS attacks work
- Mitigations: GCLB, Cloud CDN, autoscaling, VPC ingress and egress firewalls, Cloud Armor (including its rules language)
- Types of complementary partner products
- Lab: Configuring GCLB, CDN, traffic blacklisting with Cloud Armor

## Module 10 Protecting against content-related vulnerabilities

- Threat: Ransomware
- Mitigations: Backups, IAM, Data Loss Prevention API
- Threats: Data misuse, privacy violations, sensitive/restricted/unacceptable content
- Threat: Identity and OAuth phishing
- Mitigations: Classifying content using Cloud ML APIs; scanning and redacting data using Data Loss Prevention API
- Lab: Redacting Sensitive Data with Data Loss Prevention API

## Module 11 Monitoring, Logging, Auditing, and Scanning

- Security Command Center
- Stackdriver monitoring and logging
- Lab: Installing Stackdriver agents
- Lab: Configuring and using Stackdriver monitoring and logging
- VPC flow logs
- Lab: Viewing and using VPC flow logs in Stackdriver
- Cloud audit logging
- Lab: Configuring and viewing audit logs in Stackdriver
- Deploying and Using Forseti
- Lab: Inventorying a Deployment with Forseti Inventory (demo)
- Lab: Scanning a Deployment with Forseti Scanner (demo)
