

Deploying and Managing Juniper Mist Access Assurance (DMAIAA)

ID DMAIAA Prix US \$ 1 000,— (Hors Taxe) Durée 1 jour

A qui s'adresse cette formation

This course is for individuals who are responsible for implementing and monitoring Juniper Mist Access Assurance

Pré-requis

- General understanding of TCP/IP
- General understanding of security concepts
- Completion of the [Introduction to Juniper Mist AI \(IJMA\)](#) course recommended, but not required

Objectifs

After successfully completing this course, the students should be able to:

- Describe the purpose of and the need for network access control.
- Explain the Juniper Mist Access Assurance cloud architecture.
- Discuss third-party device support with Juniper Mist Edge authentication proxy.
- Describe common use cases with Juniper Mist Access Assurance.
- Discuss Juniper Mist Access Assurance best practices.
- List AAA components.
- Explain 802.1X operations.
- Discuss how the RADIUS protocol works.
- Describe RADIUS server attributes.
- Explain the functionality of RadSec.
- Discuss the Juniper Mist Access Assurance 802.1X certificate and password authentication methods.
- Explain how Juniper Mist Access Assurance can authenticate devices that don't support 802.1X.
- Describe IdP integration with Juniper Mist Access Assurance.
- Explain how to configure Juniper Mist Access Assurance authentication policies with match labels and action labels.
- Discuss how to configure Juniper Mist Access Assurance authentication methods.
- Explain how to configure Juniper Mist Edge for the Juniper

Mist authentication proxy function.

- Describe how to validate Juniper Mist Access Assurance access and authentication.
- Implement Juniper Mist Access Assurance with wired and wireless devices.
- Discuss Juniper Mist Access Assurance integration with MDM providers.

Contenu

Understanding Network Access Control

- Describe the components of network access control
- Explain the history of network access control
- Explain Juniper Mist Access Assurance

Juniper Mist Access Assurance Overview

- Explain the cloud architecture
- Explain Juniper Mist-managed devices and requirements
- Describe third-party device support
- Describe the client use cases of Juniper Mist Access Assurance
- Describe the best practices of Juniper Mist Access Assurance

802.1X Authentication

- Describe the components of AAA
- Describe 802.1X operations
- Describe the EAP operations
- Define the RADIUS protocol

Authentication and Authorization

- Explain 802.1X certificates and passwords
- Define IdP integration
- Explain non-802.1X devices
- Describe migration from legacy to IdP

Configuring Juniper Mist Access Assurance

- Describe authentication policy configuration
- Describe EAP-TLS configuration

Deploying and Managing Juniper Mist Access Assurance (DMAIAA)

- Describe EAP-TTLS configuration
- Describe MAB configuration
- Describe Juniper Mist authentication proxy configuration

Lab 1: Implementing Mist Active Assurance

Posture Compliance

- Explain posture compliance
- Describe Microsoft Intune integration
- Describe Jamf Pro integration
- Describe verifying compliance

Lab 1: Implementing Mist Active Assurance

Deploying and Managing Juniper Mist Access Assurance (DMAIAA)
