

# Fundamentals of Deep Learning (FDL)

ID FDL Prix CHF 995,- (Hors Taxe) Durée 1 jour

## Cette formation prépare à la/aux certifications

NVIDIA-Certified Associate: Generative AI LLMs (NCA-GENL)  
NVIDIA-Certified Associate: Generative AI  
Multimodal (NCA-GENM)

## Pré-requis

An understanding of fundamental programming concepts in Python 3, such as functions, loops, dictionaries, and arrays; familiarity with Pandas data structures; and an understanding of how to compute a regression line.

## Objectifs

By participating in this workshop, you'll:

- Learn the fundamental techniques and tools required to train a deep learning model
- Gain experience with common deep learning data types and model architectures
- Enhance datasets through data augmentation to improve model accuracy
- Leverage transfer learning between models to achieve efficient results with less data and computation
- Build confidence to take on your own project with a modern deep learning framework

## Contenu

### Introduction

- Meet the instructor.
- Create an account at [courses.nvidia.com/join](https://courses.nvidia.com/join)

### The Mechanics of Deep Learning

Explore the fundamental mechanics and tools involved in successfully training deep neural networks:

- Train your first computer vision model to learn the process of training.
- Introduce convolutional neural networks to improve accuracy of predictions in vision applications.

- Apply data augmentation to enhance a dataset and improve model generalization.

### Pre-trained Models and Recurrent Networks

Leverage pre-trained models to solve deep learning challenges quickly. Train recurrent neural networks on sequential data:

- Integrate a pre-trained image classification model to create an automatic doggy door.
- Leverage transfer learning to create a personalized doggy door that only lets in your dog.
- Train a model to autocomplete text based on New York Times headlines.

### Final Project: Object Classification

Apply computer vision to create a model that distinguishes between fresh and rotten fruit:

- Create and train a model that interprets color images.
- Build a data generator to make the most out of small datasets.
- Improve training speed by combining transfer learning and feature extraction.
- Discuss advanced neural network architectures and recent areas of research where students can further improve their skills.

### Final Review

- Review key learnings and answer questions.
- Complete the assessment and earn a certificate.
- Complete the workshop survey.
- Learn how to set up your own AI application development environment.
