Contenu

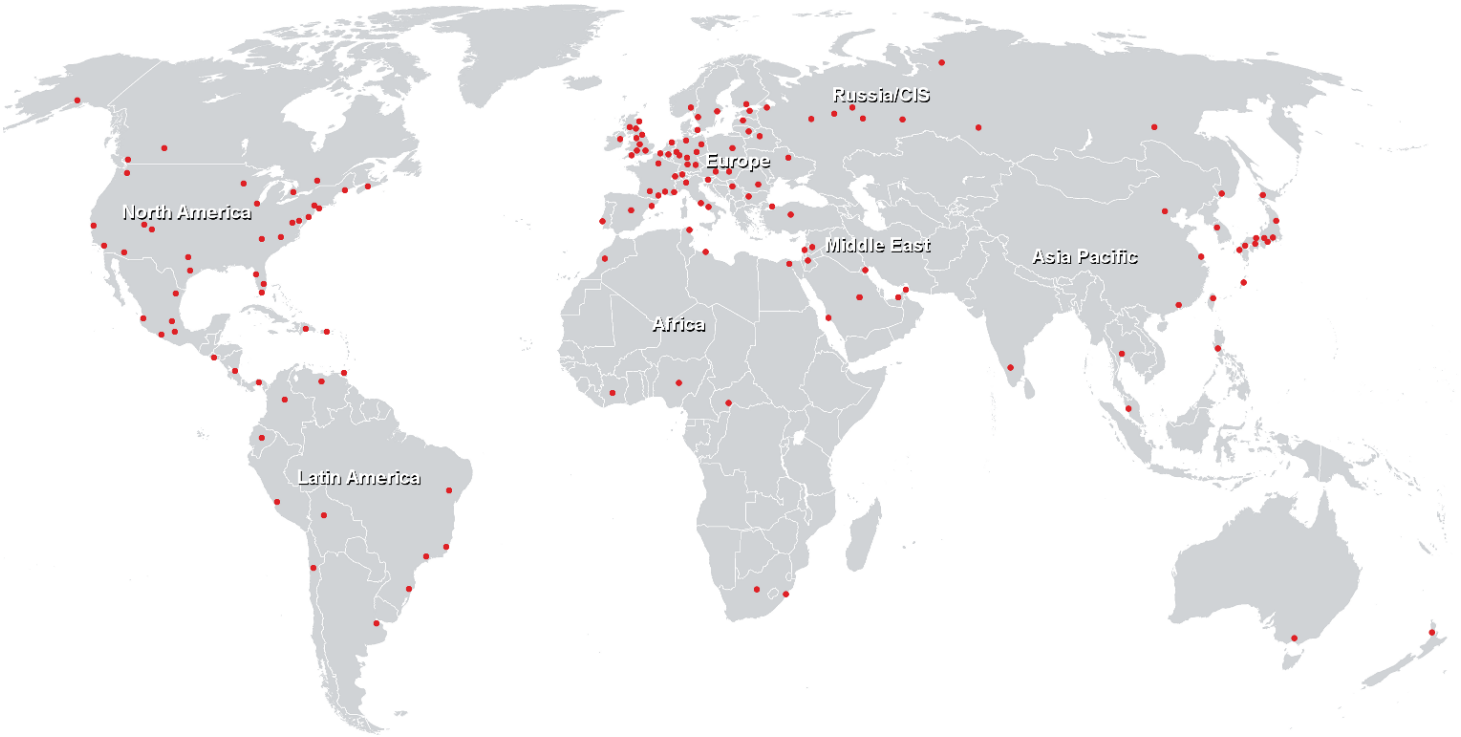

In this course, you will be introduced to OpenText™ Cloud Management, including its key concepts, architecture, features, and functionalities. The course focuses on core cloud management functionalities, including creating providers, designing services, publishing offerings, and efficiently managing cloud resources.

By the end of the course, you will be equipped with the knowledge and skills needed to effectively manage cloud environments, perform administrative tasks, and develop service offerings within Cloud Management. You will also be able to view CI Topology, implement closed-loop control processes, and troubleshoot basic cloud issues.

Highlights:

- Explore key concepts, features, and architecture of Cloud Management.
- Use the Design and Deploy (DND) functionality to design services.
- Create and manage providers, service designs, and service offerings.
- Complete administrative and basic development tasks in Cloud Management.
- Publish and manage service designs and offerings.
- Practice skills through lab exercises and instructor-led demonstrations.
- Identify new features and enhancements in the latest version.
