

# Red Hat OpenShift Administration III: Scaling Deployments for Enterprise Workloads + EX380 (DO381)

ID DO381 Prix 4 057,– € (Hors Taxe) Durée 5 jours

## A qui s'adresse cette formation

- Cluster engineers (systems administrators, cloud administrators, or cloud engineers) focused on planning, designing, and implementing production-grade OpenShift clusters. Cluster engineers require automation skills to scale their manpower to provision and manage an increasing population of clusters, applications, and users, at the same time ensuring these clusters remain in compliance with corporate standards.
- Site reliability engineers (SREs) focused on keeping OpenShift clusters and applications running without disruption. SREs are interested in troubleshooting infrastructure and application issues with OpenShift clusters and require automation skills to reduce the time to identify, diagnose, and remediate issues.

## Pré-requis

- Complete [Red Hat OpenShift Administration II: Configuring a Production Cluster \(DO280\)](#) and become a Red Hat Certified Specialist in OpenShift Administration.
- Complete [Red Hat System Administration II \(RH134\)](#) and become a Red Hat Certified System Administrator.
- Recommended, but not required: become a Red Hat Certified Systems Engineer or a Red Hat Certified Specialist in Ansible Automation. Basic knowledge about writing and running Ansible playbooks is required.

## Objectifs

### Impact on the organization

This offering supports IT operations teams that are in the prepare and expand stages of their Container Adoption Journey. The curriculum enables companies to innovate faster, scale based on customer demand, and proactively manage a growing number of OpenShift clusters that host cloud-native and cloud-compatible applications.

Red Hat has created this offering in a way intended to benefit our

customers, but each company and infrastructure is unique, and actual results or benefits may vary.

### Impact on the individual

This offering builds upon the essential skills required to configure and manage an OpenShift 4.x cluster, teaching the enhanced skills needed to operate production environments at scale, including:

- Automating Day 2 tasks to establish production clusters with higher performance and availability.
- Integrating OpenShift with enterprise authentication, storage, CI/CD, and GitOps systems to improve productivity of IT operations and compliance with organization's standards.
- Troubleshooting techniques to identify issues with cluster operators and compute capacity.

## Contenu

### Plan, implement, and manage OpenShift clusters at scale

Red Hat OpenShift Administration III and exam (DO381) expands upon the skills required to plan, implement, and manage OpenShift® clusters in the enterprise. You will learn how to support a growing number of stakeholders, applications, and users to achieve large-scale deployments.

This offering is based on Red Hat® OpenShift Container Platform 4.6. The [Red Hat Certified Specialist in OpenShift Automation and Integration exam \(EX380\)](#) is included.

### Content summary

- Manage OpenShift cluster operators and add operators.
- Automate OpenShift management tasks using Ansible® playbooks.
- Create and schedule cluster administration jobs.
- Implement GitOps workflows using Jenkins.
- Integrate OpenShift with enterprise authentication.

## Red Hat OpenShift Administration III: Scaling Deployments for Enterprise Workloads + EX380 (DO381)

---

- Query and visualize cluster-wide logs, metrics, and alerts.
- Manage both shared, file-based storage and non-shared, block-based storage.
- Manage machine sets and machine configurations.

# Red Hat OpenShift Administration III: Scaling Deployments for Enterprise Workloads + EX380 (DO381)
